PROFILE

Hey, I'm Navin Chaudhary, a frontend engineer who builds things using technologies I've learned so far, I'm super passionate about technology and always eager to learn and grow. I love diving into software engineering and making cool stuff happen!

SKILLS

Frontend development
- HTML/HTML-5
- CSS/CSS-3
- Javascript
- React
- Tailwind

PROJECTS

Gituser ⇗

Comprehensive GitHub Profile Insights by Username
- Gituser is a site where you can get all the GitHub information about any person or company by just entering a username. You will get follower, following, repositories, and much more on a single page.

Weather App ⇗

All-in-One Weather Forecast and Analytics Hub
- Weather app is a website where you will find multiple weather data points on a single page, which includes week's forecast, Temperature, Weather mode, UV, Wind, Pressure, Humidity, Sunset/sunrise time and much more.

Coffe Website ⇗

Responsive Coffee Shop Website Showcasing Menu and Brand
- Responsive website for a coffee shop, highlighting their menu, story, and brand identity. The site was built using React, Tailwind CSS, and HTML, ensuring responsiveness for a seamless user experience across all devices.

News ⇗

News Highlights App with Search and Category Filtering via NYT API
- News is a React app where you will find news highlights. This data is provided by the NYT API, and you can filter news by category. Additionally, you can search for articles.

To-Do List ⇗

Dynamic UIs with Efficient State Management and CRUD Operations
- These projects highlight my ability to create dynamic and responsive user interfaces, manage state efficiently, and implement create, read, delete operations using localstorage to persist data in the browser for better user experience and purpose fulfillment.
