Profile

Hey, I'm Navin Chaudhary, a frontend engineer who builds things using technologies I've learned so far, such as HTML, CSS, and JavaScript. I'm always looking forward to learning new things as I grow, and I love keeping myself updated with the rapidly changing tech world.

Currently, I'm mostly focused on frontend development, but I aspire to become a full-stack engineer. I'm excited about the prospect of handling end-to-end feature development, taking ownership of features, and shipping them in the best possible way.

My goal is to continuously expand my skills and contribute to innovative projects across the entire web development stack.

Skills

Frontend development
- HTML
- Javascript
- CSS,
- SCSS
- React

Languages
